GTS123 Introduction to Computers and Programming

Lab 10: Problem 4

From `sales.tsv` in the lecture note, write a program that calculates the sum of sale amount per branch. It then displays the output ordered from the branch with the largest sale amount to the branch with the smallest sale amount.

Hint: use np.argsort to get the order of the sale amount. Part of the `sales.tsv` file is shown below:

```
1001  234  51   726
1002  98   453  132
1101  156  12   87
1102  92   154  424
1201  89   78   456
```

The output should look similar to the following.

```
Branch  Total Sales
1001    1011
1002    683
1102    670
1201    623
1101    255
```

Note: To pass the test, your program must produce the exact output as shown above, including spaces and line breaks.
